Frequently Asked Questions

What is VETIGEL™ Dental?
VETIGEL™ Dental is a prescription hemostatic gel that is designed to stop moderate to severe dental bleeding within seconds. VETIGEL™ Dental is derived from a proprietary blend of plant-based polymers.

How Does it Work?
Cross-linking of polymers creates an initial seal upon which platelets aggregate, resulting in rapid initial hemostasis. All without any manual pressure.

Why should I use VETIGEL™ Dental?
VETIGEL™ Dental can save your practice time and money with faster hemostasis, leading to less anesthesia and less procedure time. Focus on your next patient, not controlling the bleeding.

Cresilon
Headquartered in Brooklyn, New York, Cresilon, Inc. is a privately-held medical device company focused on hemostatic technologies that improve wound care and advance the standard of medical treatments.

A VETIGEL™ Dental Hemostatic Gel Kit ["VETIGEL™"] is comprised of two individually-pouched 5 ml hemostatic gel syringes, two reusable syringe adapters, two dental tips, and instructions for use.

**APPLICATION**

1. **Assemble**

   Follow instructions for syringe assembly located inside box.

2. **Prime**

   Prime the unit to make sure it is functioning correctly.

3. **Blot**

   Dry the socket or bleed source to allow for better visibility.

4. **Deploy**

   Place the applicator tip as far in the socket as possible without bottoming out.

   Slowly deploy the VETIGEL™ into the socket until there is slight overflow. Then back the syringe out as you continue to expel the gel. Fill until VETIGEL™ is flush with surrounding mucosa or slight convex.

**WHERE CAN I FIND MORE INFORMATION?**

Please connect with our Sales team at 1-800-VETIGEL to learn more. Licensed veterinarians in the United States are welcome to join our pre-order list. Please email sales@VETIGEL.com with your clinic information.

No manual pressure necessary!
